

Nutritional Solution for the Growth of Beneficial Bacteria

BACTA-FOOD

BACTA-FOOD is a liquid solution of organic compounds that helps bacteria to activate by moving from the latent state (spores) to the vegetative state. 1 liter of **BACTA-FOOD** is capable of activating up to 1×10^{15} cfu (cfu: colony forming units) of bacteria.

Application instructions: Empty the entire content of the bottle of BACTA-FOOD in a clean container (caution: the container must be thoroughly rinsed if previously used with other compounds). Dissolve not more than 20g of the product that contains the bacteria in the container and let it rest for at least 2 hours at room temperature 20 - 30°C and agitate at regular intervals. Then mix well and empty the entire solution in the tank or in the application container. Finally, stir well the content of the tank or the container and apply through fertigation.

STORAGE - PRECAUTIONS

Keep the product well sealed and store in its original container. Keep it out of frost and immediate sun radiation. Wash thoroughly your hands after the application. Harmful if swallowed. Avoid contact with skin and eyes. In case of contact, wash thoroughly your skin and eyes with plenty of water. If irritation occurs, seek for medical advice. Keep out of reach of children.

SHAKE WELL BEFORE EVERY USE
